Dear Beef Producers

It is with great pleasure we offer the Beef industry an excellent set of commercially focused bulls.

These bulls are bred with a commitment to our Clients to remain viable with genetics which thrive in our Aussie environment.

This years offering of Shorthorn & Angus bulls are very well muscled, sound, functional with plenty of muscle shape & balanced EBV's & Index's. This year for the first time we are offering 13 Angus bulls which have the same commercial focus as our Shorthorns. We have a number of Clients who are using Angus bulls and this gives them and others the opportunity to source their genetics from the same environment & breeding philosophy. We will offer our black F1 bulls (Shorthorn X Angus) by private treaty.

We have seen a big lift in the beef market which is giving breeders the opportunity to see reasonable returns for their effort and work. It certainly looks as if it may be the year of the producer which is gratifying. It is now a good time to upgrade your old or unsound & inferior bulls. We recently sold a 4 year bull to return \$2600 odd also selling cull cows for \$1300 - \$1400. It certainly makes your new superior, young sire a great investment for you to reap the rewards from his progeny.

At the end of the catalogue we are offering elite Donor flushes & Frozen embryo's which gives new and established breeders an excellent opportunity to add or upgrade your breeding programme.

The Spry Family thank you for your interest in our breeding programme and look forward to your friendship and working together in the future. If we can be of any assistance with your breeding programme prior or post the sale then do not hesitate to call,

We remain

Yours faithfully,
The Spry Family

SHORTHORNS WIN COMMERCIAL COMPETITION

Courtesy of Land

Conscientious management systems and a strong importance on the herd's fertility may have been the secret to Daniel Fitzell, "Flowerburn", Peelwood's win in the district's first commercial cattle competition held earlier in the year.

As chief steward of the competition, Mr Fitzell said the idea stemmed from when he entered the Crookwell Flock Ewe competition about four years ago

"I thought it was a great idea and I learnt a lot from it," "It's the suggestion of areas of improvement from the judges that make the competition great, so as producers we can improve the production and profitability of our herds," Mr Fitzell said.

Mr Fitzell, who entered the Shorthorn breed, was placed first in the joined heifers section as well as the cows and calves section before eventually being sashed the champion commercial herd.

The "Flowerburn" cattle were described as "amazing" by judge, Gavin O'Brien Winchester Charolais, Orange.

"Mr Fitzell has his heifers calving as two-year-olds in marginal country and the cattle look amazing," Mr O'Brien said.

"Flowerburn won because their product was equal to anyone in the competition, but on a lesser environment."

The 1400 hectare property is shaly loam soil with some improved, but mainly native pastures.

Mr Fitzell, along with his father Bruce, mother Helen and partner Leah, runs a self-replacing Shorthorn herd of 140 cows joining 30 to 40 heifers each year, alongside a self-replacing merino flock.

He works on a replacement rate of 60 per cent and cull of 40pc.

"I am trying to breed a moderate, medium-maturing herd that has moderate birth weights, quick growth to 400-days and thickness in length of body," Mr Fitzell said.

"For the harsher environment and cold winters they have to endure do-ability is also important.

"I place a lot of emphasis on fertility, structural soundness, do-ability, temperament, and carcase shape."

It is tough love when it comes to fertility and culling.

"I cull anything that is not in calf; they don't get a second chance," Mr Fitzell said.

"They also get classed annually for structural soundness at marking and again at preg-testing."

He said since cracking down on fertility by preg-testing and keeping assiduous records of sire and dam identification, the fertility and early performance has "gone through the roof".

"With the herd performing well in this environment it gives me a lot more market flexibility," he said.

"The options are greater – the cattle can go to feedlots, abattoirs or the females can go into future breeding operations."

For three years now Mr Fitzell has been EU accredited, saying he liked the idea of opening up the new market options. Being EU accredited is definitely an advantage" he said.

"I need to have a lot of carcase shape and do-ability in my cattle because if they go into an EU market or pasture finished they can't put HGP in them so the carcase shape has to be bred in them." Mr Fitzell does a lot of research regarding genetics when purchasing a new sire. "I also talk to the seed-stock producers as they know their stock better than I do," he said.

"It helps when they know exactly what you are looking for, to do the best job over our females. "I look at the bulls first visually then uses the EBV's as a guide to purchase what I want." The female herd has two main influential sires, J.R. Legend and H.S. Rolex from Gerald Spy's Shorthorns, Wagga, who Mr Fitzell has been using for nearly 20 years. "Spy's imported these from the US And I have purchased sons or grandsons from these sires," Mr Fitzell said. "They have improved my herd dramatically."

Competition judge, Gavin O'Brien, said he cross-questioned Mr Fitzell on his management practises.

"He gets them as good as he can off mum, grows them out really well through to joining, then he moves them into some rougher country while in calf," Mr O'Brien said.

"That's smart – he develops the heifers up, gets them big enough to be able to calve later on, but not letting them get too fat."

Mr O'Brien said he is doing the little things right like identifying his cattle.

"It's not a big program which allows him to micro manage well," he said.

"If a cow has an average calf he knows which cow owns that calf and he will choose not to retain the cow as a breeder.

"What we saw were versatile cattle – ready straight off mum or grown out as feeder steers.

"And if they were retained into the program they were coming back into the program with good udders and fertility."

Using Sprys Genetics for 20+ years. Gavin O'Brien (co-judge) Daniel Fitzell (winner Grand Champion Commercial Herd 2015 in Upper Lachlan Commercial Herd Competition) and Ken Ikin (Crookwell Show AP & H Society President).

Commercial Focus for SPRYS Genetics

Sprys Patent's Ace G38 steers outstanding performance & return to the owners off grass.

(Slaughtered JBS, Brooklyn 31/10/14)

In a Sire Line Trial conducted on Angus females at Oliver, Tony & Marg Killalea's. The Patent's Ace steers averaged a return of \$1292.56 at 14 months. Average 319.2kg, average Fat 10.3ml with the top steer dressing 61.2%....346kg, average P8 fat 10ml to return \$1401.30. The sisters have been retained for their breeding herd.

Use Patent's Ace G38 to increase your returns.

SPRYS PATENT ACE G38

Sprys All Gold D052 genetics excel at Teys/Land Feedlot trial against 95 teams.

A team of 5 steers entered by the Willis family of Yerong Creek were placed equal 3rd in the Carcase section of this 100 day feedlot trial. They were sired by Sprys All Gold sons.

SPRYS ALL GOLD D52

Ken & Mary McCrabb & Gerald Spry with their 2014 drop weaner steers sold at Wodonga Weaner Sale in January, the McCrabbs were delighted with the result \$2.77 kg live. Pure Sprys blood. Agent, Corcoran & Parker.

SALE INFORMATION

"THE SELLING SYSTEM" The sale shed is located in close proximity to the bull pens. The auctioneer sells the bulls by auction with video of each lot projected into the screen, rather than running the sale bulls into the sale ring. This system is becoming very well accepted and we believe it is buyer and animal friendly and concurs with modern occupational, health and safety requirements.

➤ **INSPECTION**

Bulls can be inspected prior to sale with arrangements with the vendor or selling agent. This gives us the opportunity to assist in selection of the best genetics for your requirements.

➤ **GUARANTEE BULLS AND SOUNDNESS EVALUATION as per attachment.**

➤ **BREEDING GUARANTEE**

BULLS:- All bulls soundness evaluated by an independent Veterinarian prior to sale.

In the unlikely event of a claim, the vendor guarantees that (without expenses, interest, costs and damages) if any bull proves to be totally infertile or totally incapable of natural service, provided it is not caused by an injury or disease contracted since leaving the sale to replace with an animal of comparable value. If a bull does not possess a reasonable fertility, although not totally infertile any claim shall be considered on its merits by the vendor and his Veterinarian. Any complaint must be lodged with a relevant Veterinary Certificate within 6 months of the date of the Sale direct to the vendor.

➤ **HEALTH**

TB and Brucellosis free herd. JD status is Protected.

All bulls have vaccinated twice with 7 in 1. Also vaccinated against Vibriosis once, make sure you give the 2nd vaccination.

Bulls have been tested negative for persistently infected Pestivirus (BVDV) and vaccinated with Pestiguard.

Please note: The bulls in this catalogue have never been handled with horses. We recommend that if you use horses that you move your new bull with non cycling cattle so they are not spooked by a new situation. We also recommend that the new bulls are moved on their own by motorbike as this is what they are used to. We also use dogs on bulls. Gradually introduce the movement of bulls with horses so they can adapt in their own time.

➤ **DELIVERY**

We take personal interest in efficient delivery of all lots after the sale – contact Gerald direct with a minimum of 24 hours notice.

➤ **BUYERS ORDERS AND PHONE LINK UP**

Mobile phones operate successfully at the Sale Shed (Venue). AuctionPlus will not be operating so we encourage potential purchasers who are unable to attend the sale to make arrangements with the vendor or his Agent if you wish to be contacted during the sale to place bids. Please make arrangements at least 48 hours prior to sale.

➤ **PERSONAL TRANSPORT TO AND FROM SALE VENUE**

We can arrange transport to and from the sale venue, please contact the selling Agent or Sprys.

➤ **TRANSPORT OF YOUR PURCHASED ANIMALS** Stud Stock transport representatives will be available on sale day.

Please speak with Gerald regarding his recommendations.

No delivery on sale day.

Transport rebate to \$100 per bull given to purchasers in Sth Australia, Qld, Tasmania & Kl.

➤ **INSURANCE**

We encourage you to insure your purchased lot or lots. All care will be taken from the fall of the gavel but it is the purchaser's responsibility for any injury or death. An insurance agents will be in attendance Sale day.

➤ **ACCOMMODATION**

We can arrange accommodation or contact the Motels direct. We recommend:

Pavilion Motor Inn

22 Kincaid Street

WAGGA WAGGA

Ph: (02) 6921 6411

➤ **PLEASE NOTE**

It is unethical for anyone to promote or advertise or arrange the sale of cattle, other than those Vendors in the sale, unless with permission by the vendors.

➤ **AIR FACILITIES**

Good airport facilities are at Wagga and Albury and private planes may also use Holbrook.

➤ **CATERING**

Complimentary morning tea and lunch will be available prior to the sale, catered for by Little Billabong CWA.

➤ **OUTSIDE AGENT REBATE**

1. The Vendors agree to allow a rebate to outside Agents introducing their client in writing within 24 hours prior to the sale and settling on their behalf within 7 days of the sale. (This clause will be strictly enforced). Introductions must be sent direct to the Vendors.

2. Any outside Agent travelling a distance to the sale with their client and settling on their behalf within 7 days should contact the Vendor prior for approval of a larger rebate.

Sale Catalogue Disclaimer: All reasonable care has been taken to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor or the selling agents make no other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

IMPORTANT NOTICES

The Selling Agent, its members, subsidiary or related corporations, officers, agents, and employees for themselves and for those for whom they act while exercising due care provide all information without responsibility and give no guarantee whatsoever as to its accuracy.

All persons who attend the sale do so entirely at their risk and the Selling Agent, its members, subsidiary or related corporations, officers, agents, employees and its principals, for themselves and for those for whom they act, do not assume or accept any responsibility or liability of whatever nature for any injury or damage whatsoever which may occur.

EXPLANATORY NOTES FOR CATALOGUES

Only 2015 SUMMER Trans-Tasman Shorthorn GROUP BREEDPLAN EBV's or Interim EBVs with Accuracy (Acc) can be validly compared between Shorthorn herds.

ESTIMATED BREEDING VALUES (EBVs)

The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY

An accuracy is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Accuracy below 75% should be considered low.

CALVING EASE

EBVs are based on calving ease (CE) scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

DIR: Direct calving ease indicates how this animal influences the birth of its progeny.

DTRS: Daughter's calving ease indicates how well the animal produces daughters that have easier calving.

BIRTH

GL: Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate easier calving and increased growth after birth.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

FERTILITY

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

GROWTH

MILK: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 and 400 day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of animals taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MWT: Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age.

CARCASE

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

RIB: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RUMP: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

The Trans-Tasman Shorthorn GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Shorthorn Society of Australia, the Beef Shorthorn Society of Australia, the New Zealand Beef Shorthorn Association nor the ABRI oversee or audit the collection of this data.

DM: Domestic Maternal index (\$) estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in a temperate environment (e.g. Shorthorn, Angus or Hereford cows) targeting pasture grown and finished steers for the domestic trade (eg. supermarket). Steers are marketed at 480 kg live weight (260 kg HSCW and 10 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding.

EM: Export Maternal index (\$) estimates genetic differences between animals in net profitability per cow joined for an example commercial herd in a temperate environment (e.g. Shorthorn, Angus or Hereford cows) targeting steers for the Japanese B3 market. Steers are pasture grown to feedlot entry then feedlot finished for 150 days. Steers are marketed to the feedlot at 450 kg live weight, and then slaughtered after finishing at 675 kg live weight (370kg HSCW). Daughters are retained for breeding.

NM: Northern Maternal index (\$) estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Braham, Droughtmaster or Santa Gertrudis cows) targeting the export trade. Steers are finished on grass and marketed at 600 kg live weight (320 kg HSCW and 10 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Solution really stamps his progeny with the ability to hold condition in tough times. Breeders are now realising this and no doubt are blending well with most herds in Australia. A trait we must have if we want to increase market share. Trait leader for IMF and he is outcross genetics for most breeders.

Semen Available.

SHORTHORN YOUTH CLUB OF AUSTRALIA FUNDRAISER

LOT 1

MEAT PACKS

A/c Shorthorn Youth Club of Australia

The Shorthorn youth club of Australia proudly offers you :

5 x 25kg approx meat packs – packs equally made up of prime cuts, roasts, sausages, stewing cuts and mince.

The Meat is designed to fit in a **medium size esky**, so be sure to bring yours along to the sale!!

Generous sponsors have contributed to this major fundraiser for the Shorthorn Youth club this year;

Daniel Fitzell of Flowerburn pastoral has kindly donated the beast for this years fundraiser.

Flowerburn pastoral claimed the title of Grand Champion commercial herd at the recent Crookwell commercial female competition, coming first in the replacement heifer category and also the cow and calf section. So the quality of this carcase you know will be high!

Ashleigh Park feedlot – the Schuller Family have had the beast on feed for 120 days, and have contributed in a major way for a long time to making this fundraiser a success.

Country side Meats at Albury have cut up the carcase and packaged the meat.
Wangaratta Abattoirs slaughtered the animal.

Spry's shorthorns have donated the lot one position in their catalogue to allow us to offer these high quality packs of shorthorn beef.

The Youth club wish to thank the above sponsors, and just as importantly we would like thank **YOU** - past, current and future supporters of purchasing the meat packs, as it is your contribution that helps us to build a solid network and future for the beef industry and shorthorn breed alike. Happy Eating!

To become further involved in the exciting Shorthorn youth program, please don't hesitate to contact committee members –

Arrival

Upon arrival ensure your new bulls socialize with a group of animals, (anything except other bulls in the yards, when they arrive).

Run the new bull with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd). This must be done, only two new bull at a time, with the empty females, for a period of 2 to 4 weeks. Ideally give the cows prostaglandin every 2 weeks so they can continue to cycle.

Pre Joining

We recommend a breeding soundness examination (BSE), including structural assessment, testicular palpation and (ideally) a service ability test. This is mandatory for second joining and older bull each year. It will improve the fertility performance of the herd, by removing non-working bull out with the cows. If bull(s) are not service tested it is essential you observe the bull serve in the first week of joining.

Keep vaccinations up to date, vibrovax, pestivirus and leptospirosis 7 in 1 and an annual drench, 4-6 weeks prior to joining.

Joining

New bull(s) have the highest risk of breakdown in the herd, this risk can be reduced by:

- Protect a new bull by not overjoining, 40 females per bull maximum.
- It is recommended, if single sire joining with a new bull, to rotate him with a proven bull for at least once cycle. Also, it is good practice to rotate proven bull(s) for the last cycle with all new bull(s).
- Recommend that all females are joined in groups with 2 bulls.

'Most new bull fertility issues develop during the joining period, rather than being pre-existing problems, this means that bull surveillance during the joining period is essential.'

Once the joining is set up, monitoring is essential to identify issues as they develop.

Your new bulls need to be run in mobs that are easily monitored, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This includes looking for:

- The bull serving, (this has not been successful until the bull thrusts). If a bull is continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately.
- Lameness
- Evidence of penile or prepuce swelling or inflammation
- Signs of ill health, lethargy, etc.
- Numbers of females cycling, (for every 21 females, once cycles each day at the commencement of joining). After three weeks of joining, there should be one cow cycling every three days per 21 females if the bulls are working satisfactory.

Post Joining

Bulls need to be removed from the cows, at the same time, to create their new mobs. This will limit the amount of potential injuries by reducing the number of bull interactions.

Bull paddock management is very important to minimize injury between joining's. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction.

The target between joining's is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.

Early pregnancy testing is essential for good female management and detection of surprises. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring in the future.

PURCHASER OF MOST BULLS AT AUCTION will receive:

VISUAL APPRAISAL

Although EBV's provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of **functional** animals. In all situations, EBV's should be used in conjunction with visual assessment for other traits of importance (structural soundness, temperament, fertility etc). A recommended practise is to firstly select replacement breeding stock based on EBV's and to then select from this group to ensure that the final selections are visually acceptable.

GL, 200WT(x2), 400WT, SS, FAT, EMA, IMF

Top 1% for Scrotal size, Top 5% for Gestation length, Top 15% for 200wt, Top20% for 400 wt, Carcase wt & Domestic Index, Top 25% for BW & Nthn Maternal Index, Top 30% for 600 wt.
Stud Sire Potential A great blend of genetics in Ace J138 who really impresses us for his overall balance of EBV's & soundness of structure & carcase shape. The Thelma line of females are very predictable for maternal & fertility. They breed progeny who cover all the basis of a successful, profitable commercial enterprise.

Excellent balance of EBV's. Explosive weight from 200 – 400 days. The Kate C1 (Donor) & Solution E006 have proven to be a good blend of genetics. J431 has plenty of weight & do-ability with high IMF as a bonus. Breeders are just realising the merits of Solution to produce progeny who thrive in our environment. We call it do-ability at Sprys..

Retaining 50% semen marketing interest. As his name suggests J147 is an absolute meat machine on legs. Medium maturity, extremely thick & deep sided. We really like this bull and will sure put the weight & carcass into any herd but in a moderate framed package. You certainly do not need a Euro bull when you see this young Sire. We will be collecting semen prior to the sale as we have had requests to use him to produce steers for carcass competitions. His mum had a polled full sister in 2014 and she is a good one also.

Top 5% for IMF
Really like the stoutness & completeness of J429. Full brother to Lot 16. A moderate framed, deep, thick, easy doing bull who would be ideal in harsher environments. The Fances females have been super productive & high in IMF. Many top bulls have come from the Legends Frances females. Longevity at it's best with these genetics.

FABSTOCK

LIVESTOCK VITAMIN / MINERAL SUPPLEMENT

IT'S NOT EXPENSIVE!
Feed Fabstock & improve your livestock's health, nutrition and growth rates from only 3c/head/day with sheep and 17.5c/head/day with cattle.

STUBBLE MIX

Stubble mix is designed to obtain maximum production from low value dry summer feed such as cereal crop stubbles and dry natural pastures. With the use of methionine, Sulphur, Urea and Vitamin D your livestock's appetite for dry feed can be stimulated and this feed can then be converted into higher protein levels.

FEEDLOT MIX

This mix is designed for sheep and cattle to obtain maximum body weight gains in a feedlot situation. As well as providing all essential Vitamins, minerals and trace elements Fabstock Feedlot mix also contains buffers and Bovatec to help control acidosis and promote healthy growth levels.

KICK START

This mix is designed to assist in the stimulation and development of the immature weaner rumen therefore helping in the prevention of weaner setbacks. Kick Start contains all the necessary Vitamins and minerals needed to keep your weaners going forward and aid in the build up of the immune system. Dextrose and Bovatec aid in the early growth of your weaners.

freight free* on your first order from Wagga!

*Minimum order 20 bags

RAMBOOSTER

A special mix designed by Peter Harvey to assist stud breeders in obtaining maximum body growth while assisting in improving nourishment and quality of wool in their young rams

LACTATION PASTURE MIX

This mix is for sheep and cattle before and after pregnancy. Containing higher levels of Calcium, Magnesium and Phosphorus. This mix will help in the prevention of Grass Tetany and Pregnancy Toxaemia. This mix will also increase weight gains for livestock grazing winter pastures and cereal crops.

STATION MIX

A low budget mix produced for large scale graziers wanting to maintain and increase production and growth levels in large numbers at a reduced cost. Station Mix still provides your livestock with most of the required minerals without the expensive vitamins and trace elements.

NEW SUPER CYCLE

Fabstock Super Cycle is designed to help increase ovulation in ewes and cows prior to natural joining as well as Artificial Insemination. Super Cycle is recommended to be given to ewes/cows 4 weeks before and during joining.

Stud Sire Potential. A very impressive Angus Sire who was used on heifers & cows in the Spring 2014. Out of a first calver born unassisted. Efficient has the genetics, performance & EBV's to make him a top sire. He has tremendous thickness of top and a great butt & big testicles. Anyone who has seen this bull have been really impressed. Selling full possession. Sprys retaining 50% income from semen marketing. Top priced bull at Millah Murrah was sired by Efficient's Sire.

Efficient has been 50k tested with a new set of EBVs available end of the month.

Available prior to sale.

Selling on a per Embryo Basis.

Selling 4 Frozen Embryo's sired by Sprys Patent's Ace G38. (Embryo's are export qualified to the UK & USA + Canada, Australia)

What an opportunity to purchase genetics from one of the great Shorthorn females in the breed. Fancy Pants has had an outstanding show career winning many Royal Championships including Interbreed supreme Exhibit at Melbourne Royal 2013.

She is dark red, thick, deep sided, easy doing with a super disposition. Her full brother, Sprys Double Barrel H155 was sold for \$28,000 to Dunroan Stud, Tasmania in 2014. His progeny are really starting to turn heads with plenty of weight & natural thickness.

SPRYS PATENT'S ACE G38

MULTIMIN[®]

Injection for Cattle

OPEN THE WINDOW OF PRODUCTIVITY BEFORE JOINING.

Deliver essential trace minerals quickly when they have the most impact.

MULTIMIN[®] is a multi-mineral injection designed to be used at critical times in the production cycle. One such window of productivity is the 30 days before joining. Given during this time, the minerals in Multimín can assist conception and embryo survival, leading to a tighter calving pattern.

- Contains selenium, copper, zinc and manganese, trace minerals that are essential for conception and maintenance of pregnancy.
- Improve fertility and improve your return.

Contact your local area sales manager today.

MULTIMIN is a registered trademark of Virbac (Australia) Pty Ltd.
